# PMGateway

- No more time taken to travel to and from site for your data.

- Power Quality and Fault Level data files sent directly to your email account.

- Real time data sent via email or SMS text message straight to your PC, 'phone or tablet via PMGateway.

- Emails and texts sent out automatically or on demand.

- Communicate remotely with your power quality analyser or fault level monitor using your own mobile 'phone.

- Secure login sequence for increased data security.

   - Data sent as compressed files for reduced costs.

The PMGateway application ('App.') is loaded onto an Android mobile 'phone or tablet and can be used to control remote communication to and from any PMSeries analyser with Bluetooth. This device is left within Bluetooth comms. distance of the operating analyser and will send data files by email to your inbox automatically and on demand*.

The App. enables timed remote download and control of the unit through a series of 'commands'. Remote control of this App. and therefore the analyser is achieved by sending SMS messages to the Gateway 'phone. It in turn interprets the message and performs the command requested through Bluetooth comms. with the analyser, sending any requested information back to the user via email or SMS.

Remote commands include: Login, logout, response, [analyser] start, stop, restart, status and values.

*PMGateway requires mobile signal, 3G/4G or WIFI for remote communications to be achieved.

Compressed data files sent straight to your inbox.

Available with Outram's entire range of Bluetooth analysers including the PM7000 FLM, PM7000, PM7503, PM3000, PM2000, PM1000 and AP300 series.
